

### Customer Value Proposition:

POLA SPONGE is a composite electromagnetic interface (EMI) shielding and environmental sealing gasket material consisting of hundreds of individual fine wires embedded into the z-axis of soft closed cell, silicone sponge elastomer.

Available in various flat seal configurations, including sheets, strips and die-cut parts, POLA SPONGE is easily integrated into existing application assemblies, making the switch from a non-EMI solution possible.

With force requirements for gasket deflection that can be more than half that of alternative solutions that provide both EMI shielding and weather sealing performance, POLA SPONGE provides the opportunity for increased design leniencies such as thinner flange requirements and reduced fastener quantities. The result is the potential for a total cost of ownership reduction in excess of 75% through weight, material and labor savings.

### Features and Benefits:

- Low-hardness closed cell silicone sponge allows for reduced gasket load requirements to obtain weather sealing and EMI shielding performance
- Multiple wire alloy options allow for galvanic compatibility to be optimized between the gasketing and mating surfaces
- Cured in place oriented wires will not dislodge, thereby eliminating foreign object debris concerns
- Wire "bite-through" during gasket deflection allows for non-conductive pressure sensitive adhesive to be used rather than the conductive systems more commonly offered with EMI gasketing solutions
- Various form factors are offered including strips, sheets and converted gaskets, thereby allowing for easy application and manufacturing integration
- Lower gasket load requirements allow for broader tolerance schemes, with less fasteners and thinner flange designs, resulting in lower costs associated with the overall system design.
- Galvanic compatibility allows for optimized corrosion mitigation and avoidance of related rework costs.
- Elimination of foreign object debris ensures costly application rework due to electrical shorting can be avoided.
- The elimination of conductive pressure sensitive adhesive results in better adhesion and less galvanic corrosion potential for the overall system.
- Various form factors reduce secondary operations and capital expenditures commonly associated with gasket conversion.

**Table 1**

MATERIAL SPECIFICATIONS				
Typical Properties	Silicone Closed Cell Sponge	Wire Alloys		
		Aluminum <sup>1</sup>	Monel	Phosphor Bronze <sup>2</sup>
Material Specification	AMS-3195	Alloy 5056, AMS-4182	QQ-N-281, AMS-4730	Alloy 30, ASTM B-105
Wire Diameter	-	0.005 in (0.13 mm)	0.0045 in (0.11 mm)	0.002 in (0.05 mm)
Temperature Range	-65 °F to 392 °F (-55 °C to 200 °C)	See Below <sup>3</sup>		
Recommended Compression	10% - 40%, (considering LMC & MMC) <sup>4</sup>			
Recommended Closure Force	10 PSI to 40 PSI			
Sponge Density	0.028 lbs/in <sup>3</sup>	-		
Wire Population Density	-	650/in <sup>2</sup>		

**Notes**

1. Except maximum tensile strength of 75,000 PSI
2. Non-standard, please inquire
3. Composite material is limited by sponge silicone temperature range
4. LMC: Least Material Condition, MMC: Maximum Material Condition

**POLA SPONGE SHEETS:**

Sheets are available in standard widths up to 9 inches, created by bonding 3 inch strips. 3 inch wide sheets are the most common. Two bond lines per 9 inch sheet can be expected. Sheets can be converted with traditional cutting methods including steel rule dies or water jets.

# POLA SPONGE - Product Information

## POLA SPONGE STRIPS:

Strips are available in standard widths from .093 to 1.000 inches, with a recommend height to width ratio of no greater than 1:1. Standard strip lengths are 11 feet. Bonded continuous lengths are available upon request.

Twin strips are a variation of standard strips in that the oriented wires occupy only a portion of the total strip width. The unoccupied portion of the gasketing provides improved sealing and corrosion resistance for applications requiring optimized seal performance. Strips are available in widths 0.375" and larger, with the wire-occupied portion having a standard width of 0.250".
