

EMI Shielding  
EZ-Matrixx

## ORBEL CORPORATION

### EZ-MATRIXx FEATURES INCLUDE:

- Copper Alloy Nickel Silver
- Variety of Size Options
- EZ-Bend Form Lines
- Precision Ventilation Holes
- Quick Prototyping Solution
- Cost Effective
- RoHS Compliant
- ITAR Approved

### EZ-Matrixx™ Board Level Shielding *Shielding Tomorrow's Technology*

Orbel is the recognized leader in EMI/RFI Shielding, and is a vital collaborator from prototyping through production. To continue providing the best tools for developing solutions we are excited to debut our new EZ-Matrixx™ modular prototyping shield, now available in Metric measurements!

The EZ-Matrixx™ is the best way to prototype your next PCB Shield. It can be readily and easily formed into a square or rectangular RF board shield to match almost any profile. The EZ-Matrixx™ has the form flexibility of a foil, and the sturdiness of a standard board shield.

Orbel uses a highly solderable Nickel Silver Alloy to produce the EZ-Matrixx™. This choice in material makes the EZ-Matrixx™ ideal for anyone looking to quickly apply and test an RF board shield for a development application.
